

## Petfolio - App Bugs & Suggestions

### Vendor

**Issue 1:** If we provide a verified email id, the error message is " This email Id already Exist". We can mention as "There is already a user registered with this email id. Please log in/add new email id"

**Issue 2:** Profile Picture Uploading: After uploading an image instead of showing a preview, an empty card is shown with Upload image text. Only after some time the Image loads but below that text shows Upload Image

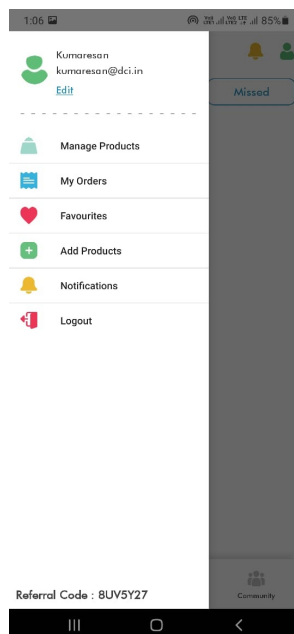

Upload Image

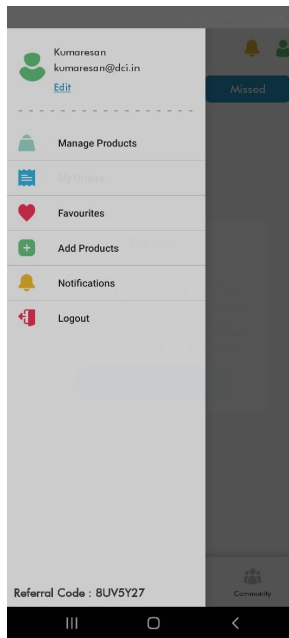

Save Changes

**Issue 3:** The uploaded profile picture is not shown in the hamburger menu

**Issue 4:** Once I click on the My orders/favorite screen from the menu, it directs to the page and if we go back to the menu, the respective feature text is not clear. (Android)

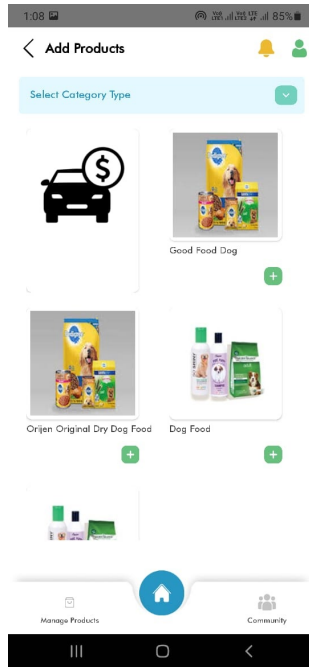

**Issue 5:**

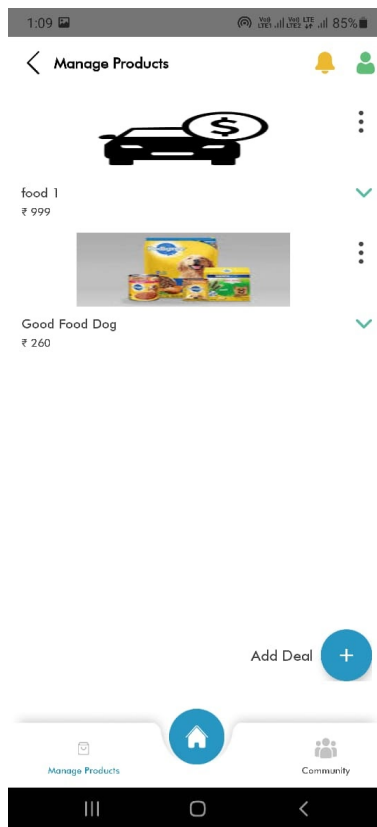

**Favourites Link is not working (Also spelling is wrong)**

**Issue 6:** In products screen, Spelling mistake - “threshold” | Correct: “threshold” (Android)

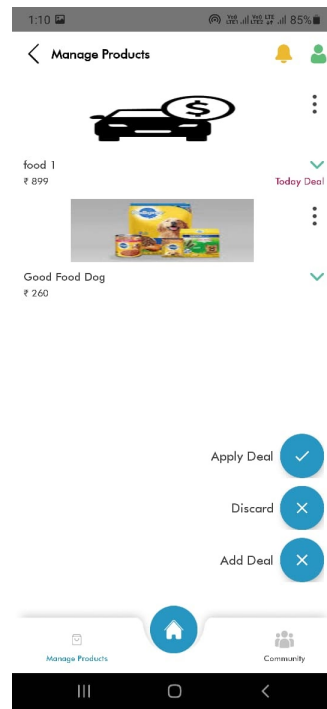

**Issue 7:** After adding product the card length is expanded (Android)

**Issue 8:** The predefined products images appear expanded in the Manage products section.

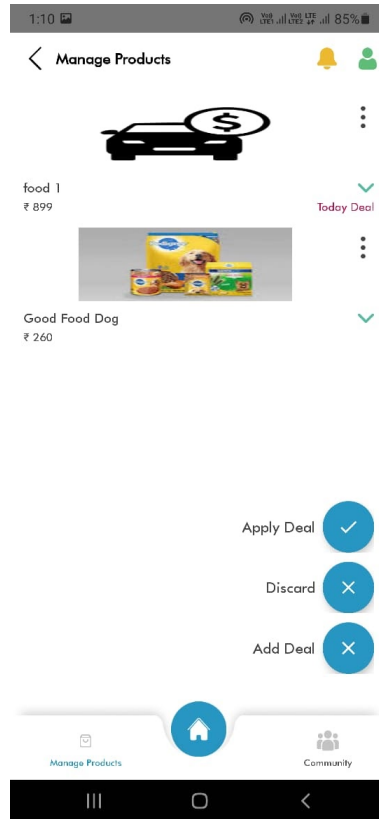

**Issue 9:** The icons used in this page is not clear (shadow is shown at the bottom)

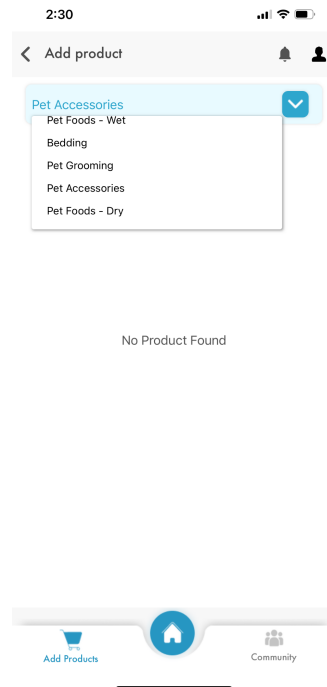

**Issue 10:** We need to revise the orders in Menu. "Add Products" should be placed 1st followed by "Manage products" as users who are entering "Manage Products" initially won't be able to understand terms like "Apply Deal".

**Issue 11:** No variation in the icons for "Discard" & "Add Deal" button. (Android)

When we apply Deal and then discard it the value of product does not change (iOS and Android)

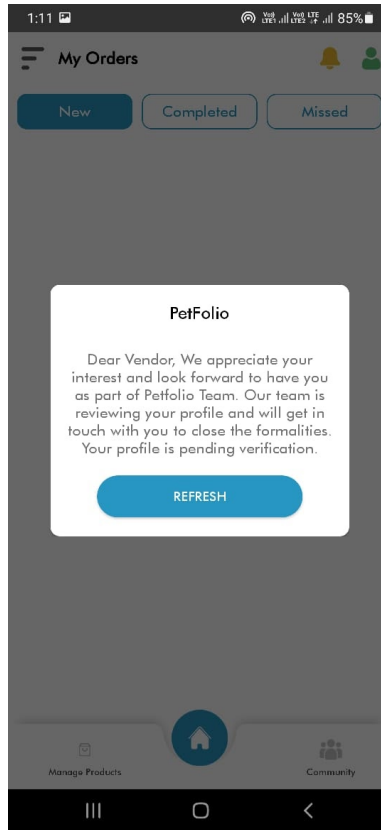

**Issue 12:** Also, the categories are getting repeated once we have chosen "Pet Accessories" (iOS)  
More 20+ categories are showing up there

**Issue 13:** Each default product page section is not clear. Description is not editable (iOS and Android)

**Issue 14:** Whenever the business details are edited the following screen is shown. Instead of overlaying the screen with a huge message - we can show status in the profile. Till the details are approved, users can access other parts. Right now its a major concern for navigation and user experience

**Issue 15:** In the Add products, product price accepts 15 digit numbers instead of 4 to 6 digits

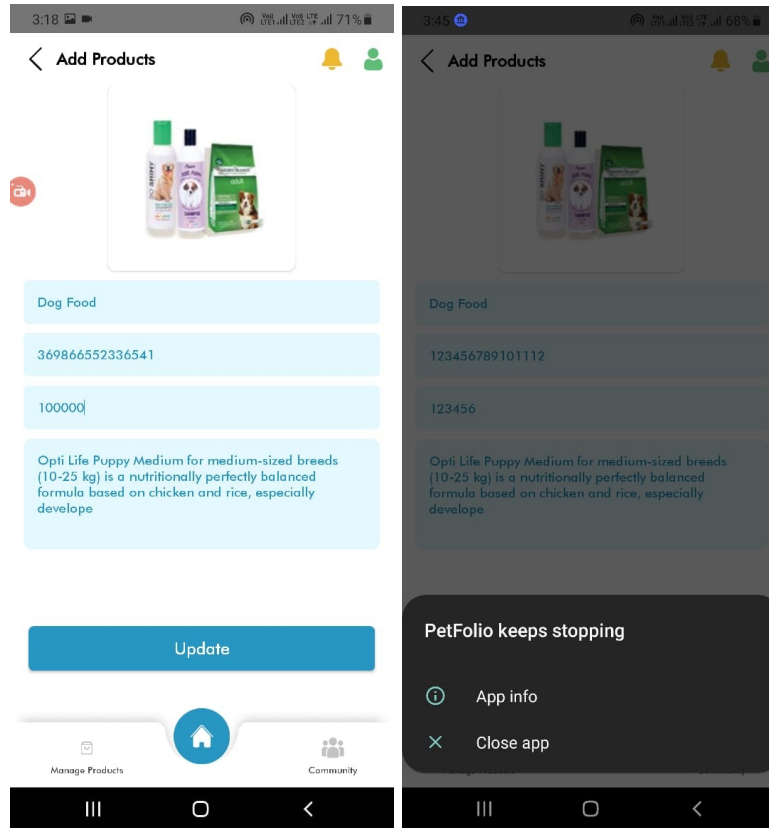

**Issue 16:** The app crashes when we enter the 15 digits in the product price and 6 digits in the threshold.

Crash Test value:

Product price: 123456789101112

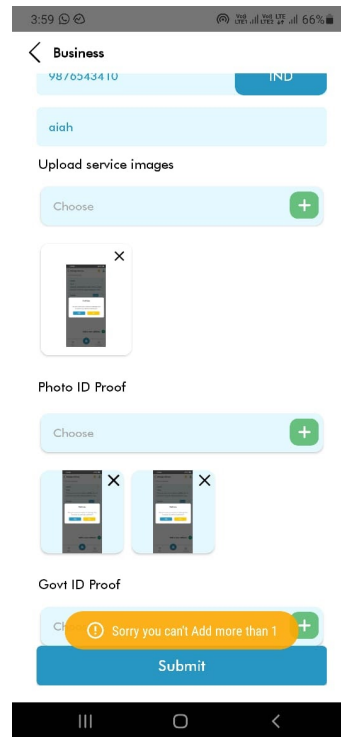

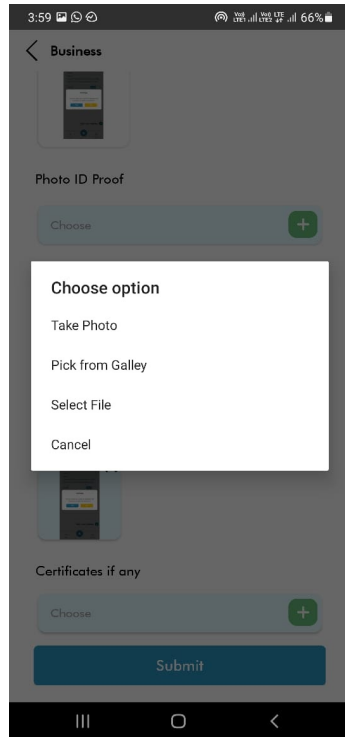

Product threshold: 123456

**Issue 17:** In the signup process, The app accepts file sizes greater than 2MB. If it accepts files size greater than 2MB, then in a later stage we require a large database to maintain the same. Image Cropping should be there. Otherwise images appear stretched.

**Issue 18:** In the signup process, Spelling mistake “Galley”

Issue 19:

While I have uploaded all images only it shows PDF for 2 fields (iOS)
